

FRONT-END WEB DEVELOPMENT BOOTCAMP

CURRICULUM

Eight modules

4 hours/module

Master the basics of front-end web development in this 8-day intensive bootcamp. The bootcamp begins with the foundations of the web - HTML, CSS and JavaScript (including a brief introduction to jQuery), and then moves on to the very popular Bootstrap framework that helps create stunning websites and applications with ease. The web foundations along with Bootstrap, set the stage for the focus of the workshop - Google's Angular framework, a much sought after skill in the industry today. The bootcamp gets you prepared for an entry-level position as a front-end web application developer.

PREREQUISITES

(Apart from those common to other offerings)

- Knowledge of a programming language like C, C++ or Java.
- Basic algorithms knowledge

CHAPTERS AND TOPICS

GETTING STARTED

Introduction to the World Wide Web

- History of the Web
- Client-server Architecture
- Anatomy of a URL
- HTTP Basics
- Browser and its Developer Tools
- Introduction to Front-end Technologies

HTML BASICS

Organising the Content of a Web Page in HTML

- Basic Tags and Attributes - Adding Paragraphs, Heading and Links
- Block-level and Inline Container Tags
- Including Media Elements - Images, Audio, Video and the iframe Tag
- Creating Tables and Lists
- Adding Forms to Web Pages
- Form Validation (including usage of HTML5 input elements and attributes)
- Web Storage - Cookies, Local and Session Storage
- Web Hosting

CSS BASICS

Understanding the way CSS rules behave

- Various Ways of Applying Styles
- CSS Selectors
- Inheritance of Styles
- Selector Specificity and the Cascade

CSS Properties

- The Box Model and related properties
- Background related properties
- Text and font related properties
- Hiding and showing elements
- Handling horizontal and vertical overflow of content

Layout techniques

- The display Property

Floats
Positioning
Media Queries and Responsive Web Design

JAVASCRIPT BASICS

Introduction to JavaScript Language Fundamentals

Variables and Primitive Data Types
Variable Scopes, Scope chain
Using Arrays
Expressions, Operators and Operator Precedence
Control flow - Branching and Looping

Introduction to Functions

Function Declaration and Usage
Handling Variable Number of Arguments
Callbacks - Passing Functions as Arguments
Returning Functions
Closures

Introduction to Objects

Object Declaration using Literal Syntax
Accessing Properties and Methods
Adding and Deleting Properties
The Module Pattern

The “Class” in JavaScript

Functions Context (*this* keyword) and the Constructor Function
Introduction to the Object Prototype and Prototype Chain

Basic Introduction to Built-in Classes and Objects in the JavaScript Language

`call()` and `apply()` as Methods of Functions
Array methods
Date methods
JSON

Introduction to Handling error scenarios

Strict Mode Execution
Exception Handling using *try..catch..finally* and *throw*

The Document Object Model (DOM)

Nodes and the DOM Tree
Node Relationships and DOM Tree Traversal
Methods for DOM Manipulation

Event Handling

- Various Browser Events
- Different Ways to Handle Events
- Event Object Properties and Methods

JQUERY BASICS

Introduction to Basics of jQuery

- Why jQuery?
- DOM Manipulation in jQuery
- Event Handling in jQuery
- Ajax requests using jQuery
- Important Utility Methods

BOOTSTRAP

Bootstrap Fundamentals

- Introduction to Bootstrap
- The grid system
- Typography-related classes
- Image helper classes
- Responsive utilities
- Using Glyph icons and Font awesome
- Buttons
- Tables
- Dropdowns, input groups
- Alerts

Advanced components

- Forms
- Navs and Navbar
- Panels, collapsible panels and panel groups
- Modal dialogs
- Carousel

Theming

- Introduction to Sass
- Customizing Bootstrap

ANGULAR

Pre-requisites

Introduction to ES6

TypeScript Basics

Introduction to Angular

The SystemJS Universal Module Loader

Directives

Routing - Passing data, child routes and lazy-loading of modules

Dependency injection

Injectors and providers

Injecting the Http service

Communicating with the backend using Http

Hierarchy of injectors

Data binding

Binding events

Binding to properties and attributes

2-way data binding

Observables and observers

Communication between components

Communication patterns

Component lifecycle

Change detection

Capstone project

Building a blogging application using Angular
